

PACTO[®] 501

Drug Toilet

Simple and safe examination with PACTO[®] 501:

- Makes the general examination routine easier and more effective
- Facilitates the legal submission of evidence
- Eliminates the risk of infection for the staff
- Secures hygienic handling of the waste
- Encapsulate the waste in a flush foil
- Requires no electricity, water or sewage
- Easy to install, to use and to move between different locations.

TECHNICAL INFORMATION PACTO® 501

PACTO® 501 is an effective, economic and hygienic method of fighting the spread of narcotics. Being encapsulated in a transparent polythene flush foil, the excrement can be examined in the most hygienic way.

The lockable collection part eliminates the risk for the excrement being flushed down.

The flush foil is made of polythene and is very tough, to ensure it does not break during transportation of the waste. The flush foil can be incinerated after usage. Polythene is still environmental friendly, since the only rest products when incinerated are carbon dioxide and water.

Technical data

Colour:	White
Weight:	20 kg
Dimensions:	Depth 470 mm
	Width 530 mm
	Height 504 mm

Subject to changes in construction and design.
